

Attachment 2. ELIGIBLE APPLICANT DOCUMENTATION

Alameda County Flood Control and Water Conservation District, Zone 7 (also known as the “Zone 7 Water Agency” and “Zone 7”) is a body corporate and politic that has statutory authority over water management, which includes but is not limited to water supply, water quality, flood control, or storm water management for the eastern portion of Alameda County.

Zone 7 Water Agency (Zone 7) is a local public agency (as defined in CWC 10701[a]) in accordance with CWC §10795. Zone 7 is one of the 10 active zones of the Alameda County Flood Control and Water Conservation District. The District was established in 1949 by the Alameda County Flood Control and Water Conservation District Act (Stats. 1949, c. 1275, p. 2240 to Water Code Appendix, Chapter 55) and provides for flood control and water supply. In 1957, voters of eastern Alameda County approved the creation of the Zone 7 to address the specific issues of flooding and water supply in the Livermore-Amador Valley in eastern Alameda County. Zone 7 manages the groundwater basin in its 425 square mile service area such that it is consistent with CWC §17053.

Zone 7 has the legal authority to enter into a grant agreement with the State of California in accordance with the Alameda County Flood Control and Water Conservation District Act (CWC Appendix §55-5(4) - Nature of district; powers).

There is no direct litigation against Zone 7 that may impact its financial condition or its ability to complete the proposal; however, there is litigation against DWR involving the Sacramento-San Joaquin Delta that may ultimately decrease water deliveries to all State Water Contractors (SWC) which may have an effect upon all SWC’s financial condition, including Zone 7.

Zone 7 is in compliance with CASGEM reporting requirements and State surface water diversion reporting requirements. No tribal lands are within the proposed project area, and as such, there are no tribal notification requirements for this project.
